

Remote Monitoring System (RMS)

Automatic AED Maintenance 24/7

AED's (Automated External Defibrillators) save lives **IF** they are working properly. In order to ensure they are working properly, they must be checked on a regular basis. But this doesn't always happen and as a result, many AED's are in need of service and some don't work at all.

If your AED doesn't work in an emergency, people can die. These deaths are not only tragic and needless, they are often followed by multi-million dollar lawsuits.

If you own an AED, it must be kept operational at ALL times. But how can you constantly monitor your AED to make sure that it is working 24/7? You can't, but RMS can because it constantly monitors your AED and alerts you if it is not working properly or if it goes missing.

RMS Features

- Monitors and reports AED status through your AED Management program
- Reports if the AED is not operating properly or it is missing
- Monitors all AED brands, new and old
- Works out of the box with simple, quick setup
- Installs easily in HeartStation AED cabinets and most other brands
- Connects automatically to strongest cellular connection
- 5 - 7 year battery life.
